

>> Showcase your organization's solutions in this annual **New Product Preview**, which is also posted on www.healthdatamanagement.com. For a schedule of upcoming Tech Marketplace sections, please contact Ashleigh Henrichs at 262.697.8369 or ashleigh.henrichs@sourcemedia.com <<

NEW PRODUCT PREVIEW

ComplyAssistant LLC believes that it is **"All About The Tool"**.

ComplyAssistant Office Suite was developed with that in mind. The web-based design helps you organize your day to day compliance activities and provides you with access to your compliance data via queries, reports and charts. We offer pre-defined compliance content (e.g. HIPAA, SOX, FISMA, FIPS, etc). We invite you to join us in a web or onsite demonstration at any time.

Please visit www.complyassistant.com to request a demo or call us at 732-845-9508.

Emageon and Dell have teamed to produce RadSuite Express™ for the fast growing small to mid-sized hospital and clinic market. With this turn-key solution, facilities producing less than 80,000 studies a year can now start using a top-ranked PACS in days. RadSuite Express gives specialists and referring physicians in smaller facilities access to the same high-end, multi-disciplinary 3D imaging tools used by specialists in some of the largest facilities and hospital systems in the U.S.

NextGen Healthcare, a leading provider of fully integrated healthcare information systems, recently announced a new feature called ChartMail™. Bundled with NextGen® EMR (electronic medical records), this advanced feature will enable providers who use NextGen EMR to securely send health records to a patient or to other providers with a few clicks. The health records can include virtually any data, such as patient images, demographics, histories, lab results, allergies, diagnoses, patient education documents, and more.

SCC Soft Computer's comprehensive Genetics Information Systems Suite of products offers a full range of genetics tools to automate workflow in the diagnostic laboratory. These software modules function as comprehensive, stand-alone pieces, or as a contiguous suite for complex genetics-associated laboratory testing. The SCC Genetics Suite offers cytogenetics, molecular, flow cytometry, and HLA modules to help manage, streamline and report on your ever-growing genetics testing volumes.

SDS has recently added key functionalities to their HealthPort EDMS including Registration Scanning and Workflow that unifies critical patient information from registration systems, ADT, MPI, and physical documentation (license, insurance card, etc.) into a single repository. The newly released Forms Management functionality allows facilities to design and barcode forms, scan existing forms and map data to forms. These added pieces make HealthPort EDMS the single tool needed to manage the entire document lifecycle.
